View from specialist: It is creative, and of certain scientific and educational value.

[ABSTRACT] Objective: To discuss the diagnosis value and safety of lung biopsy under CT. Methods: Clinic data of 30 cases with lung biopsy under CT were analyzed, retrospectively. Results: There were 12 cases with adenocarcinoma, 8 cases with squamous cell carcinoma, 5 cases with tuberculosis, 2 cases with chronic inflammation, with diagnosis rate as 100%. Conclusions: With high safety, lung biopsy under CT is valuable.
